### Objected Informalities

The disclosure is objected to because of the following informalities:

### In The Claims

Claim 28, line 2, "a plurality patients" should be – a plurality of patients --.

Appropriate correction is required.

# Rejection Under 35 U.S.C. 102(b)

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, 9-10 and 12-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Britton et al. (5,585,642).

Britton et al. (5,585,642) disclose, in figs. 1-9, a beamline control and security system for a particle beam therapy apparatus. The system includes a charged particle beam generator 11 for generating a charged particle beam; a plurality of treatment rooms 1-5 each having an irradiation unit 20; a first beam transport system 14; a plurality of second beam transport systems each having magnets or electromagnets (see col. 5, lines 66-67) or first shutters 23 and 29 connected in series, communicated between the first beam transport system 14 and the treatment rooms 1-5; a path switching devices 13, 15, 17, 19 and 21 which are double electromagnets or second shutters; a control computer 52 for controlling the first and second shutters to delivery the particle beam in sequence to selected one of the plurality of treatment rooms 1-5; a

Application/Control Number: 10/790,849 Page 3.

Art Unit: 2881

dipole switch controller 60; power supplies A, B and C; an alternatively selecting device which is a mechanical switch (see col. 12, lines 27-42); and a selected treatment room information output device 170 for sensing the information request from the selected room to the computer 52 for controlling the shutters to provide the particle beam to the selected room.

Claims 8 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Reasons for indicating allowable subject matter

The prior art fails to disclose a particle beam therapy system having a shutter controller for controlling an open state of a first shutter into a closed state when radiation dose detected by a detector provided in a selected treatment room reaches a dose setting value as recited in claim 8; or a second shutter lighter than a first shutter as recited in claim 11.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- 1) Hiramoto et al. (6,316,776) disclose a therapy system having a shutter for extracting a beam; and
  - 2) Hartmann et al. (6,736,831) disclose a therapy system having a dose detector.

#### Conclusion

Application/Control Number: 10/790,849 Page 4
